Useful Industrial Terminology

Assortment refers to the **variety or range of items or options available within a particular category or collection**. In business and retail contexts, it often describes the selection of products a store or company offers to its customers

"quotation" is basically a **price offer**. When a company wants to buy fabric or other textile products, they ask for a quotation. This quotation helps the buyer understand exactly what they're getting and for what price. It's like a **detailed price tag for bulk textile orders**. The buyer can then decide if they want to make the purchase based on the quotation. Every buyer orders as a Invoice Format. Can make updations as per buyer requirement. (**Revisable**)
